

2950 : Sludge Removal Pump

The + product :

3 functions in 1:

- Sludge removal from radiators and heated floors to eliminate cold zones.
- Algae elimination (sources of blockages) in heated floors.
- Descaling of boiler heating elements (copper and steel only).

Description

Translucent, anti-impact plastic tank **to view the fluid level**.
Manual flow reverser (electric) to attack deposits in both directions:
quicker and more effective action.

IP54 protected motor for maximum lifetime.

Robust and practical transport handle.

Max usage temperature: 50°C.

Virax additives must be added to optimise the action of the sludge removal pump. These additives are specific to the cleaning to be carried out. Their objective is to re-establish the ideal circulation in the installation for better effectiveness.

Accessory available : 20 m transparent pipe extension (ref. 295022) to connect to the water inlet, drains, etc.

More Information

Supplied with

Two 2 m long transparent pipes and 1 set of 8 connectors included to adapt to all configurations.
