

# 2531: Press chains

## The + product :

**Powerful crimping:** 3 compression points.  
**180° opening:** for use in confined spaces.

## Description

Large diameter crimping system comprising 3-segment chains combined with an activator jaw (PCS) for 32 kN crimping tool.

The PCS activator jaw + press chain assembly is **24% lighter** than a three-element jaw.

**180° opening** of the chains for easy positioning around the fitting, even in confined spaces.

Powerful crimping thanks to **3 compression points** that optimally distribute the clamping forces to ensure tightness.

Press chain made from special forged steel, **resistant to stress and wear.**

Can be used with the Virax 32kN crimping tool, as well as with most standard 32kN hydraulic machines on the market with a compatible housing.

Check the compatibility between VIRAX connection systems and press chains/activator jaw using the Vir-app application or at the end of the catalog.

## More Information

---

Capacity

V profile: Ø42 - 54 mm (for copper)  
M profile: Ø42 - 54 mm (for steel, carbon steel, stainless steel, or copper)
